

2022 COLOR WHEEL SYSTEM

VALUE

LEGEND				
Color	Value:	Chroma:		
Family:	Refers to color lightness	Refers to color		
Refers	from 0 (Dark) to 9 (Light)	intensity from		
to main		0 (Low/Black/		
Hue		Gray/White) to		
within		9 (High/Colorful)		
color	- KV/ 6 $-$	-		
wheel				

Color Bias:

Divided into 3 equal parts within each color family. Position is indicated by left/right adjacent color family otherwise repeated color family indicates central position, excludes Achromatic family (K).

Color Mixing Guide:

Hue: Primary, Secondary & Tertiary mixology of all Eternal Colors **Value:** Darker colors affect a greater value change than lighter colors when used in equal amounts.

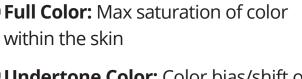

Chroma: Closer color families produce higher chroma mixes than ones that are further apart. Opposite color families produce the lowest chromas resulting in gray brown biases.

Viscosity Key:

- No Drop refers to Heavy Body Formula
- One drop refers to High Flow formula ()
- Two drops refers to Wash Formula (▲ ▲)

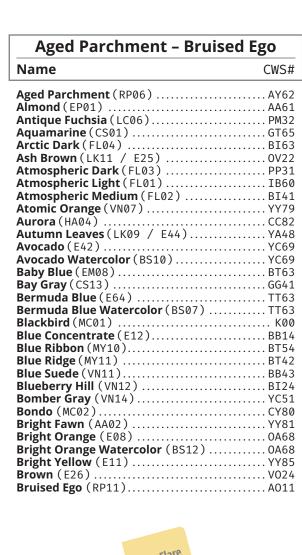

Undertone Color: Color bias/shift of washed out color within the skin

center of the wheel to vibrant on the outside of the wheel. a Chroma Color Wheel where colors are instead organized from muted at the the center of the wheel to light on the outside of the wheel. The second features The first features a Value Color Wheel where colors are organized from dark at

tattoo color choices and color theory.

easy to view, color wheel visuals, for tattooers to use as an accurate daily tool for each color and number has been organized into not one but two separate and for all of the Eternal Ink colors and their dynamic facets within the skin. As such, correlates to a proprietary method of scientific measurement and categorizing as it is the only one in the world to use a unique color reference number that The Eternal Ink Color Wheel System (CWS) is unlike any previous color wheel

and how is it different? Color Wheel System (CWS) What is the Eternal Ink

How does it work—RV26?

Why use it?

When deciding what colors to invest in, from apprentice to master tattooer, a working knowledge of the colors and how they work in the skin is needed. However, a person is unable to test new colors and see healed results prior to purchase, so we must depend on shared knowledge from the industry and seeing others use it first or from the advertising efforts of a manufacturer. With that, one is still left to the overall advertising spin while true knowledge still only comes from first hand use.

To better represent Eternal Ink and the true beauty of each specially designed and meticulously crafted formulation, The Eternal Ink (CWS) Color Wheel System's only "spin" is that it is visually represented as a circle. Every CWS# reveals the true characteristics of each color and how diverse each is. There is no "spin" but rather just pure color information.

With this pure information, not only are artists able to choose colors precisely, but they are also able to confidently mix colors with laser point accuracy while also being able to use each color wheel as a map to "move around the color space" and to see the non-subjective adding and subtracting of Hue's, Value's and Chromas within a mix. Learning, using, and predicting what a color will do within the skin, has never been so straight-forward.

When to use it?

Use the Eternal CWS for quick reference for a new tattoo design's color scheme, studying color theory in downtime, collaborating with other tattooers and customers, or while deciding on a new purchase. The CWS creates a language for conversation that bridges the gap between artist and non-artist terminology that accurately presents each color product.

Where to put it?

Each Eternal Color Wheel comes in a large and easy to view, 26" by 35" format that can be hung from any tattoo studio wall and inspire any nearby workspace or can be folded down to a 9" by 12" booklet for convenient travel on the go.

Will there be a digital version available?

The Eternal Ink CWS has been designed to reflect the most accurate relationship of how pigments act in the skin and how they mix together in real-world scenarios. Although a digital version is available on the Eternal Ink website, due to variable screen settings and the differences of additive blending properties, digital mixing does not 100% reflect the real-world subtractive mixing properties of physical tattoo pigment.

How often will it be updated?

The CWS will be annually updated to reflect new colors.
